Abstract

E-learning has become the mandatory component of all educational institutions like schools, colleges, and universities in and around the world due to the pandemic crisis of Covid-19. This deadly situation has flipped out the offline teaching process. E-learning provides an effective teaching method that brings out the best in students. The data for the study has been collected from students, who are currently pursuing their undergraduate degrees in aided colleges in Perumbavoor in Ernakulam district of Kerala. This research paper aims to study the E-learning process among students who are familiar with web-based technology. It also helps to find out solutions to improve the self-study skills of students. The stratified sampling method has been adopted in this study and the sample size is 100. The findings of the study reflect the impact of E-learning, students' interest in using E-learning resources, and their performance. In conclusion, this study shows that E-learning has become quite popular among the students all over the world, particularly during the lockdown period following the Covid-19 pandemic.
